

# HARLEY-DAVIDSON Heated Grips

Story by Nate Kersjes  
Photos by Jesse B. Nelson

Keep comfortable on cool morning and frigid night rides. Warm hands have a major impact on overall body comfort, and sometimes gloves just aren't enough. These thermostatically controlled H-D grips have variable heat settings and automatic temperature monitoring to adjust to changing ambient temperatures. The grips remain at a constant temperature regardless of changes in outside temperatures. The self-contained control circuit and control knob means you have no additional switches or controller boxes to mount, and the grips are switched on/off with the ignition to avoid draining your battery. The "glue-less" grip design allows grip removal if you change handlebars or motorcycles. Original equipment on the FLHTK Ultra Limited™ model, these Black Rubber Heated Grips feature smooth surfaces and a clean design that complements any styling direction.

Harley-Davidson Heated Grips

The stock grips are only as warm as the air around them. In this case, room temperature.

1 Remove the gauge bezel mounting hardware.

2 Remove the gauge bezel to allow access to the handlebar wiring hole.

3 Loosen and remove the switch housing mounting bolts.

4 Twist the grip to release it from the glue and remove it.

5 Feed welding wire through the bars to pull the grip wires.

6 Attach the grip wiring to the welding wire.

7 Pull the wiring through the handlebars.

8 Slide the new grip into place.

9 Align the glue-less grip into the switch housing.

10 Install the switch housing mounting hardware.

11 Reinstall the gauge bezel.

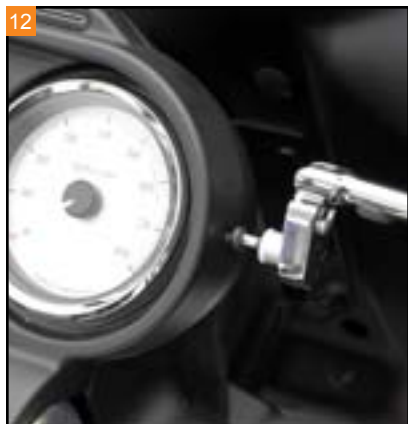

NOT YOUR GRANDPA'S

Remove the throttle grip.

Pry the plug out of the twist-grip sensor.

Removing the plug allows the sensor to be plugged into the heated throttle grip.

Slide the heated grip onto the handlebar.

Plug the twist-grip sensor into the grip.

Install the end cap on the throttle grip.

Tighten the switch housing mounting hardware.
